

QUIET STRENGTH HAD ON THE DAY'S MARKET WITH GOOD RESULTS

War Shares Irregular; Investment Issues Show Great Strength Through Very Active Market; Minor Shares Active.

NEW YORK, April 10.—The continued irregularity of war shares and the quiet strength of investment bonds was the feature of an active market with the usual prominence of minor low priced issues of various descriptions. Among the latter were numerous securities whose values are yet to be determined, in which rise there was evidently professional origin. Sentiment is decidedly more cheerful. The European situation, involving the fall of the Greek ministry, is being ignored in further domestic action of an encouraging character. This condition has also more than found its earnest reflection in better railway earnings, higher prices in steel and copper,

and the resumption of dividends by industrial companies including American Cotton Oil, which declared a quarterly dividend of one percent after an interim of over four years. Virtually every branch of the stock list was included in the advance but copper was most conspicuous. Arizona made a new record on a rise to 86. Total sales were 1,020,000 shares. Bonds were strong in spite of increased foreign offerings. Total sales were \$7,550,000.

(By L. J. Overlock)
BOSTON, Nov. 4.—It seems foolish to repeat the same advice every day but conditions are so favorable for a big advance in the copper shares that I cannot help urging their purchase. The stocks we have urged buying for the past week are just starting and should sell twenty points higher. Buy the copper is my advice.

(By Levy Bros.)
Seaman set goes into operation today.

Secretary McAdoo returning from Pacific coast finds prosperity returning throughout the country.

British house will vote another credit of a billion and a quarter dollars.

Germany preparing to make another loan of \$250,000,000. French commerce credit of \$15,000,000 established with New York banks.

Canada war orders \$5,000,000,000. Railroad returns show increase everywhere over last year.

George Bixler was found guilty in Nozales of stealing Governor Maytor's big Packard automobile. The surprise of the trial was that while the Carranza authorities did not put up any kind of a fight to keep the young man out of the penitentiary, he did not in any way implicate them in this and other deals that he is supposed to know about.

It was Gray who suggested the advisory board and he explained its workings. "The advisory commission," he said, "will ascertain from the various road district representatives in the association where in that district work is most needed and recommended to the board of supervisors the expenditures of each district's pro rata at the point indicated."

"The commission will advise with the board of supervisors on the letting of all contracts and will pass upon the completed roads before they are taken over. It will be in touch with the people of all the districts, eliminate much annoyance that would otherwise be occasioned to members of the board, lighten their work in caring for two thirds of the details and to this commission can be referred by the board all petitions for road building under the law."

"Besides this it will furnish the publicity, make public the costs and expenses and per capita to the taxpayers the information they are entitled to, show them how each dollar is buying one hundred cents of results."

Speaking of the pro rata plan Gray said it could not be made to apply to bridge building but would apply to roads. A bridge could not be built and left. A piece of needed road could be built according to specifications, however.

"People in Douglas sought to sell

Members of the county road issue association yesterday generally expressed themselves as well satisfied with the action taken at the Douglas meeting Wednesday. They consider that the plan that will be presented is the only one feasible under the circumstances and is most likely to meet the desires of the taxpayers who will have the determination of the matter as the polls.

The report of the executive committee that was adopted by the association was the suggestion of J. J. Bowen, the Bisbee District representative. Seen yesterday by a Review representative he gave further explanations of the plan and of its working, saying:

"The executive committee had presented to it a mileage of roads that approached 900. This had to be cut down to a trunk line system and was cut to 525 miles. In doing this we felt we had shaved to the closest points if the system were to be adequate and any were near complete. We had not been given figures as to a probable bond issue. Then came the engineer's report on costs which were higher than had been anticipated. The association was ready to ask for \$600,000 in bonds and the estimate was about twice that amount. We could not see our way to reduce the mileage without endangering the success of the bond issue, probably insuring its failure. The report of the executive committee is the result."

"It is impossible to build 525 miles of road as specified for \$600,000 but it is possible to give a road system of 525 miles that is always traversable and many miles of which will stand out as examples of modern road building and what this county can do when funds are available. It will prove the value and success of bonding for roads."

"In all parts of the county there are roads that are traversable and are fairly good at all times, other stretches are good some of the time and some that are good none of the time. Under our plan the road districts will inform the advisory commission what improvement and improvements they deem first essential. Their rate of the bond issue will be spent there. The roads that are built will be built right. They will show what can be done and will make a vast improvement in traffic in the county."

"For instance, in Douglas District the Silver Creek road is probably the most needed at once. Its delegate to the association will so inform the advisory commission and action will be taken on that recommendation. The Boardland to the Nek Mexico line will thus be vastly improved. Every district will thus have its most needed road work under the bond issue. It will produce more miles of good roads than could otherwise be obtained. We make a splendid start on building a practically complete system. It does not mean a patchwork system. It means the making of the whole system passable and the sections of the best type of roads for ordinary traffic."

"Our plan tells where the money is to be spent and each road district will know that it will get its share of what it asked to be made to go just as far as possible in building road of the type determined upon. Thus it is a definite proposition placed squarely before the voters."

C. F. Moss, of Benson, said: "We want some roads built. We have told what we want. We cannot get all we want at this time. We will take what we can get now. If we only had one mile of road built we would want that one mile built right and at the point where it would do the most good. Benson is for the bond issue under the plan suggested."

It was Gray who suggested the advisory board and he explained its workings. "The advisory commission," he said, "will ascertain from the various road district representatives in the association where in that district work is most needed and recommended to the board of supervisors the expenditures of each district's pro rata at the point indicated."

"The commission will advise with the board of supervisors on the letting of all contracts and will pass upon the completed roads before they are taken over.
